WHERE ARE THE LESSON FILES?

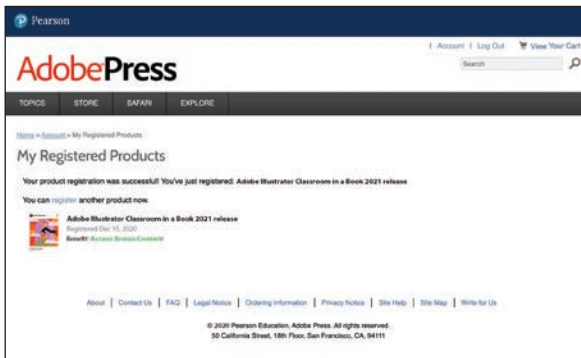

Purchase of this Classroom in a Book in any format gives you access to the lesson files you'll need to complete the exercises in the book.

- 1 Go to www.adobepress.com/IllustratorCIB2021.
- 2 Sign in or create a new account.
- 3 Click Submit.

● **Note:** If you encounter problems registering your product or accessing the lesson files or web edition, go to www.adobepress.com/support for assistance.

- 4 Answer the questions as proof of purchase.
- 5 The lesson files can be accessed through the Registered Products tab on your Account page.
- 6 Click the Access Bonus Content link below the title of your product to proceed to the download page. Click the lesson file links to download them to your computer.

● **Note:** If you purchased a digital product directly from www.adobepress.com or www.peachpit.com, your product will already be registered. However, you still need to follow the registration steps and answer the proof of purchase question before the Access Bonus Content link will appear under the product on your Registered Products tab.

1 GETTING TO KNOW THE WORK AREA 28

Introducing Adobe Illustrator	30
Opening an Illustrator file	31
Exploring the workspace	33
Getting to know the toolbar	34
Finding more tools	36
Working with the Properties panel	38
Working with panels	39
Moving and docking panels	40
Switching workspaces	42
Saving a workspace	43
Using panel and context menus	44
Changing the view of artwork	46
Using view commands	46
Using the Zoom tool	48
Panning in a document	50
Viewing artwork	50
Navigating multiple artboards	51
Using the Artboards panel	53
Panning with the Navigator panel 	54
Arranging multiple documents	54

2 TECHNIQUES FOR SELECTING ARTWORK 58

Starting the lesson	60
Selecting objects	61
Using the Selection tool	61
Selecting and editing with the Direct Selection tool	63
Selecting with a marquee	65
Hiding and locking objects	67
Unlocking objects you've locked	68
Selecting similar objects	69
Selecting in Outline mode	70
Aligning objects	71
Aligning objects to each other	71
Aligning to a key object	72
Distributing objects	72
Aligning anchor points	73
Aligning to the artboard	74
Working with groups	75
Grouping items	75
Editing a group in Isolation mode	77
Creating a nested group	78
Exploring object arrangement	79
Arranging objects	79
Selecting objects behind	79

3 USING SHAPES TO CREATE ARTWORK FOR A POSTCARD 82

Starting the lesson	84
Creating a new document	84
Working with basic shapes	87
Creating rectangles	87
Editing rectangles	88
Rounding corners	90
Rounding individual corners	91
Creating and editing ellipses	93
Creating and editing circles	94
Changing stroke width and alignment	96
Creating a polygon	97

Reshaping a path	133
Using the Width tool	134
Assemble the last dinosaur	136

5 TRANSFORMING ARTWORK 138

Starting the lesson	140
Working with artboards	141
Adding artboards to a document	141
Editing artboards	143

Copying artboards between documents	145
Aligning and arranging artboards	146
Setting options for artboards	147
Reordering artboards	148
Working with rulers and guides	149
Creating guides	150
Editing the ruler origin	151
Transforming content	153
Working with the bounding box	153
Positioning artwork using the Properties panel	154
Scaling objects	155
Reflecting objects	157
Rotating objects	158
Transforming with the Free Transform tool	160
Shearing objects	161
Positioning the bicyclist	162
Using Puppet Warp	163

6 USING THE BASIC DRAWING TOOLS 166

Starting the lesson	168
Creating with the Curvature tool	169
Drawing paths with the Curvature tool	169
Drawing a river path	170
Editing a path with the Curvature tool	172
Creating corners with the Curvature tool	173
Creating dashed lines	175
Drawing with the Pencil tool	177
Drawing paths with the Pencil tool	177
Drawing straight lines with the Pencil tool	178
Joining with the Join tool	180
Adding arrowheads to paths	182

7 DRAWING WITH THE PEN TOOL 184

Starting the lesson	186
Understanding curved paths	186
An introduction to drawing with the Pen tool	187
Getting started with the Pen tool	187
Selecting and editing paths	189
Drawing straight lines with the Pen tool	190

Starting with curved paths	192
Drawing a curve with the Pen tool	193
Drawing a series of curves with the Pen tool	194
Converting smooth points to corner points	195
Combining curves and straight lines	197
Creating artwork with the Pen tool	199
Drawing the swan	200
Editing paths and points	204
Deleting and adding anchor points	204
Converting between smooth points and corner points	206
Working with the Anchor Point tool	207

8 USING COLOR TO ENHANCE ARTWORK 210

Starting the lesson	212
Exploring color modes	213
Working with color	214
Applying an existing color	214
Creating a custom color	215
Saving a color as a swatch	216
Creating a copy of a swatch	217
Editing a global swatch	218
Editing a nonglobal swatch	219
Using the Color Picker to create color	221
Using Illustrator swatch libraries	223
Adding a spot color	223
Creating and saving a tint of a color	225
Converting colors	226
Copying appearance attributes	226
Creating a color group	227
Using the Color Guide panel for creative inspiration	228
Applying colors from the Color Guide panel	230
Using Recolor Artwork to edit colors in artwork	231
Recoloring artwork	231
Working with Live Paint	234
Creating a Live Paint group	236
Painting with the Live Paint Bucket tool	237
Modifying a Live Paint group	238

- Starting the lesson 242
- Adding type 243
 - Adding text at a point 243
 - Adding area type 244
 - Converting between area type and point type 245
 - Importing a plain-text file 246
 - Threading text 247
- Formatting type 248
 - Changing font family and font style 248
 - Activating Adobe Fonts 249
 - Applying fonts to text in Illustrator 251
 - Fixing missing fonts 252
 - Changing font size 252
 - Changing text color 254
 - Changing additional character formatting 254
 - Changing paragraph formatting 255
 - Working with glyphs 256
 - Vertically aligning area type 256
 - Using glyph snapping 257
- Resizing and reshaping type objects 259
 - Creating columns of text 260
 - Reshaping type objects 261
 - Sampling text formatting 261
- Creating and applying text styles 262
 - Creating and applying a paragraph style 262
 - Practicing paragraph styles 263
 - Editing a paragraph style 265
 - Creating and applying a character style 265
 - Editing a character style 267
- Wrapping text 267
- Warping text 268
 - Reshaping text with a preset envelope warp 268
 - Editing the envelope warp 269
- Working with type on a path 270
- Creating text outlines 272

10 ORGANIZING YOUR ARTWORK WITH LAYERS 274

Starting the lesson	276
Understanding layers	277
Creating layers and sublayers	278
Creating new layers	278
Creating a sublayer	280
Editing layers and objects	280
Finding content in the Layers panel	280
Moving content between layers	283
Viewing layer content differently	285
Reordering layers and content	287
Locking and hiding layers	289
Duplicating layer content	291
Pasting layers	292
Applying appearance attributes to a layer	294
Creating a clipping mask	295

11 GRADIENTS, BLENDS, AND PATTERNS 298

Starting the lesson	300
Working with gradients	301
Applying a linear gradient to a fill	302
Editing a gradient	302
Saving a gradient as a swatch	303
Adjusting a linear gradient fill	304
Applying a linear gradient to a stroke	306
Editing a gradient on a stroke	307
Applying a radial gradient to artwork	309
Editing the colors in the radial gradient	309
Adjusting the radial gradient	310
Applying gradients to multiple objects	312
Adding transparency to gradients	313
Applying a freeform gradient	314
Editing a freeform gradient in Points mode	315
Applying color stops in Lines mode	316
Working with blended objects	317
Creating a blend with specified steps	318

Modifying a blend	319
Creating and editing a smooth color blend	320
Creating patterns	322
Applying an existing pattern	322
Creating your own pattern	323
Applying your pattern	325
Editing your pattern	326

12 USING BRUSHES TO CREATE AN AD 328

Starting the lesson	330
Working with brushes	331
Using Calligraphic brushes	332
Applying a Calligraphic brush to artwork	332
Editing a brush	333
Drawing with the Paintbrush tool	334
Editing paths with the Paintbrush tool	336
Removing a brush stroke	338
Using Art brushes	339
Applying an existing Art brush	339
Creating an Art brush	340
Editing an Art brush	341
Using Pattern brushes	343
Creating a Pattern brush	345
Applying a Pattern brush	347
Editing the Pattern brush	348
Using Bristle brushes	349
Changing Bristle brush options	349
Painting with a Bristle brush	350
Grouping Bristle brush paths	351
Working with the Blob Brush tool	352
Drawing with the Blob Brush tool	352
Editing with the Eraser tool	354

13 EXPLORING CREATIVE USES OF EFFECTS AND GRAPHIC STYLES 356

Starting the lesson	358
Using the Appearance panel	360
Editing appearance attributes	361
Adding another fill to content	362
Adding multiple strokes and fills to text	364
Reordering appearance attributes	367
Using live effects	368
Applying an effect	368
Editing an effect	370
Styling text with a Warp effect	371
Temporarily disabling effects to make edits	371
Applying other effects	372
Applying a Photoshop effect	374
Working with 3D effects 	375
Using graphic styles	375
Applying an existing graphic style	376
Creating and applying a graphic style	377
Updating a graphic style	378
Applying a graphic style to a layer	380
Scaling strokes and effects	381

14 CREATING ARTWORK FOR A T-SHIRT 384

Starting the lesson	386
Working with symbols	387
Using default Illustrator symbol libraries	387
Editing a symbol	390
Working with dynamic symbols	391
Creating a symbol	392
Breaking a link to a symbol	393
Replacing symbols	395
Working with Creative Cloud libraries	397
Adding assets to a Creative Cloud library	397
Using library assets	400
Updating a library asset	401
Working with global editing	403

15 PLACING AND WORKING WITH IMAGES 406

Starting the lesson 408

Combining artwork 409

Placing image files 409

 Placing an image 410

 Transforming a placed image 411

 Cropping an image 412

 Placing a Photoshop document 414

 Placing multiple images 417

Masking images 419

 Applying a simple mask to an image 419

 Editing a clipping path (mask) 420

 Masking with a shape 421

 Masking an object with text 422

 Finishing the masked text 424

 Creating an opacity mask 424

 Editing an opacity mask 425

Working with image links 428

 Finding link information 428

 Embedding and unembedding images 429

 Replacing an image 430

16 SHARING PROJECTS 432

Starting the lesson 434

Packaging a file 435

Creating a PDF 436

Creating pixel-perfect drawings 437

 Previewing artwork in Pixel Preview 437

 Aligning new artwork to the pixel grid 438

 Aligning existing artwork to the pixel grid 440

Exporting artboards and assets 442

 Exporting artboards 442

 Exporting assets 444

INDEX 448

4 EDITING AND COMBINING SHAPES AND PATHS

Lesson overview

In this lesson, you'll learn how to do the following:

- Cut with the Scissors tool.
- Join paths.
- Work with the Knife tool.
- Outline strokes.
- Work with the Eraser tool.
- Create a compound path.
- Work with the Shape Builder tool.
- Work with Pathfinder effects to create shapes.
- Work with the Reshape tool.
- Edit strokes with the Width tool.

This lesson will take about 45 minutes to complete. To get the lesson files used in this chapter, download them from the web page for this book at www.adobepress.com/IllustratorCIB2021. For more information, see “Accessing the lesson files and Web Edition” in the Getting Started section at the beginning of this book.

Soon after you begin creating simple paths and shapes, you will most likely want to use them to create more complex artwork. In this lesson, you'll explore how to edit and combine shapes and paths.

Starting the lesson

In Lesson 3, you learned about creating and making edits to basic shapes. In this lesson, you'll take basic shapes and paths and learn how to edit and combine them to create artwork for a few dinosaur illustrations.

● **Note:** If you have not already downloaded the project files for this lesson to your computer from your Account page, make sure to do so now. See the “Getting Started” section at the beginning of the book.

- 1 To ensure that the tools function and the defaults are set exactly as described in this lesson, delete or deactivate (by renaming) the Adobe Illustrator preferences file. See “Restoring default preferences” in the “Getting Started” section at the beginning of the book.
- 2 Start Adobe Illustrator.
- 3 Choose File > Open. Locate the file named L4_end.ai, which is in the Lessons > Lesson04 folder that you copied onto your hard disk, and click Open. This file contains the finished artwork.
- 4 Choose View > Fit All In Window; leave the file open for reference, or choose File > Close (I closed it).

- 5 Choose File > Open. In the Open dialog box, navigate to the Lessons > Lesson04 folder, and select the L4_start.ai file on your hard disk. Click Open.
- 6 Choose File > Save As. If the Cloud Document dialog box opens, click Save On Your Computer to save it locally.
- 7 In the Save As dialog box, change the name to **Dinosaurs.ai** (macOS) or **Dinosaurs** (Windows), and choose the Lesson04 folder. Leave Adobe Illustrator (.ai) chosen from the Format menu (macOS) or Adobe Illustrator (*.AI) chosen from the Save As Type menu (Windows) and then click Save.
- 8 In the Illustrator Options dialog box, leave the Illustrator options at their default settings, and click OK.
- 9 Choose Window > Workspace > Reset Essentials.

● **Note:** If you don't see Reset Essentials in the Workspace menu, choose Window > Workspace > Essentials before choosing Window > Workspace > Reset Essentials.

Editing paths and shapes

In Illustrator, you can edit and combine paths and shapes in a variety of ways to create your own artwork. Sometimes that may mean starting with simpler paths and shapes and using different methods to produce more complex paths. This includes working with the Scissors tool () , the Knife tool () , and the Eraser tool () ; outlining strokes; joining paths; and more.

Note: You'll explore other methods for transforming artwork in Lesson 5.

Cutting with the Scissors tool

There are several tools that allow you to cut and divide shapes. You'll start with the Scissors tool () , which splits a path at an anchor point or on a line segment to create an open path. Next, you'll cut a shape with the Scissors tool and reshape it.

- 1 Click the View menu, and make sure that the Smart Guides option is selected. A checkmark appears when it's selected.
- 2 Choose 1 Dino 1 from the Artboard Navigation menu in the lower-left corner of the Document window. Choose View > Fit Artboard In Window to make sure the artboard fits in the document window.

- 3 Select the Selection tool () in the toolbar, and click the purple shape on the left side of the artboard.
- 4 Press Command and + (macOS) or Ctrl and + (Windows) three times to zoom in to the selected artwork.

After you modify this shape, you'll add it to the dinosaur head on the right side of the same artboard to complete the beak.

- 5 With the shape selected, in the toolbar press and hold on the Eraser tool () , and select the Scissors tool () .

- 6 Move the pointer over the top edge of the shape, in the middle (see the first part of the following figure). When you see the word “intersect” and a vertical magenta line, click to cut the path at that point and then move the pointer away.

● **Note:** To learn more about open paths and closed paths, see the section “Working with basic shapes” in Chapter 3.

Cuts made with the Scissors tool must be somewhere on a line or a curve rather than on an end point of an open path. When you use the Scissors tool to click the stroke of a closed shape, like the shape in this example, the path is cut where you click so that it becomes an open path.

- 7 Select the Direct Selection tool (▸) in the toolbar. Move the pointer over the selected (blue) anchor point and drag it up.

- 8 From where you originally cut the shape, drag the other anchor point up and to the left until a magenta alignment guide shows, indicating it’s aligned with the other anchor point you just dragged.

Notice that the stroke (the yellow border) doesn’t go all the way around the shape. That’s because cutting a shape with the Scissors tool makes an open path. If you only want to fill the shape with a color, it doesn’t have to be a closed path. It is, however, necessary for a path to be closed if you want a stroke to appear around the entire fill area.

Joining paths

Suppose you draw a “U” shape and later decide to close the shape, essentially joining the ends of the “U” with a straight path. If you select the path, you can use the Join command to create a line segment between the end points, closing the path.

When more than one open path is selected, you can join them to create a closed path. You can also join selected end points of two separate paths. Next, you’ll join the ends of the path you just edited to create a closed shape again.

- 1 Select the Selection tool (▸) in the toolbar. Click away from the path to deselect it and then click in the purple fill to reselect it.

This step is important because only one anchor point was left selected from the previous section. If you were to choose the Join command with only one anchor point selected, an error message would appear. By selecting the whole path, when you apply the Join command, Illustrator simply finds the two ends of the path and connects them with a straight line.

► **Tip:** If you wanted to join specific anchor points from separate paths, select the anchor points and choose Object > Path > Join or press Command+J (macOS) or Ctrl+J (Windows).

- 2 Click the Join button in the Quick Actions section of the Properties panel.

When you apply the Join command to two or more open paths, by default Illustrator first looks for and joins the paths that have end points located closest to each other. This process is repeated every time you apply the Join command until all paths are joined.

► **Tip:** In Lesson 6, you’ll learn about the Join tool (⌘/⌘), which allows you to join two paths at a corner, keeping the original curve intact.

- 3 In the Properties panel, change the stroke to 0 by clicking the down arrow icon until the stroke is removed.

Next, you’ll round the corners on the top of the shape.

- 4 Select the Direct Selection tool (▸) in the toolbar and drag across the top of the shape to select the top two anchors.
- 5 Drag one of the corner radius widgets toward the center of the shape to round the corners.

- 6 Choose Select > Deselect and then choose File > Save.

Cutting with the Knife tool

You can also use the Knife tool (✂) to cut vector artwork. Using the Knife tool, you drag across a shape, and instead of creating open paths, you end up with closed paths.

- 1 Press the spacebar to access the Hand tool, and drag in the document window to see the green shape to the right.
- 2 With the Selection tool (▸) selected, click the green shape.

Any objects selected will be cut by the Knife tool. If nothing is selected, it will cut any vector objects it touches.

- 3 Click Edit Toolbar (☰) at the bottom of the toolbar. Scroll in the menu that appears and toward the bottom of the menu you should see the Knife tool (✂). Drag the Knife tool directly onto the Scissors tool (✂) in the toolbar. When the Scissors tool shows a highlight, release to add the Knife tool to the list of tools.
- 4 Press the Escape key to hide the menu.

- 5 With the Knife tool now selected in the toolbar, move the Knife pointer (✂) above the selected shape. Drag in a “U” shape to cut into the shape.

- 6 Choose Select > Deselect.
- 7 Select the Selection tool (▸), and click the new shape on the top (see the following figure).
- 8 Click the Fill color box in the Properties panel, make sure the Swatches option (■) is selected in the panel that appears, and click to select a darker green. I chose the color named Dark green.

- 9 Choose Select > Deselect.

Cutting in a straight line with the Knife tool

By default, as you just saw, dragging across a shape with the Knife tool makes a free-form cut that is not straight. Next, you’ll see how to cut artwork in a straight line with the Knife tool to give the dinosaur head (the green shape) a highlight.

- 1 With the Selection tool (▸) selected, click the large light green shape.
- 2 Select the Knife tool (✂). Move the pointer just above the top of the shape. Press the Caps Lock key to turn the Knife tool pointer into crosshairs (-|-).
The crosshairs pointer is more precise and can make it easier to see exactly where you begin cutting.

Note: Pressing the Option/Alt key keeps the cut straight. Adding the Shift key (Option/Alt-Shift) constrains the cutting to a multiple of 45 degrees.

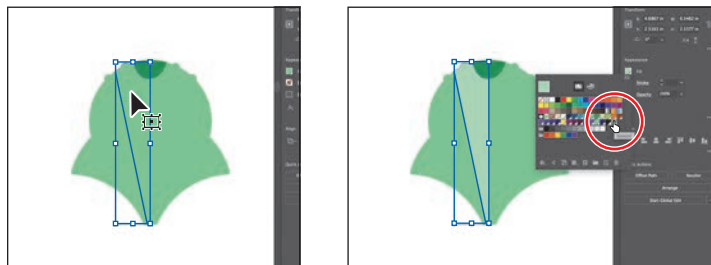

- 3 Press and hold Option+Shift (macOS) or Alt+Shift (Windows), and drag down all the way across the shape to cut it into two. Release the mouse button and then the keys.

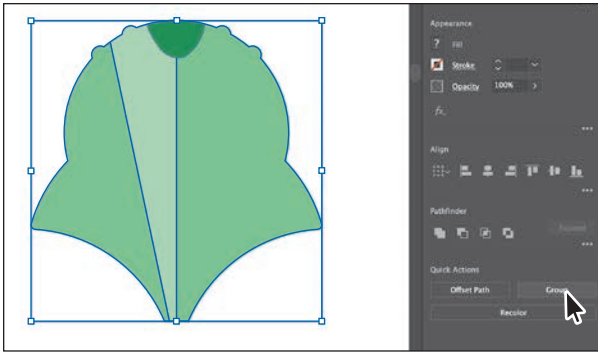

- 4 Press and hold Option (macOS) or Alt (Windows), and drag down from the top of the shape, down, at a slight angle, all the way across the shape to cut it into two. Release the mouse button and then the key. This way, you can cut in a straight line in any direction.

- 5 Choose Select > Deselect.
- 6 Select the Selection tool (▸), and click the middle shape you just created (see the first part of the following figure).
- 7 Click the Fill color box in the Properties panel, make sure the Swatches option (■) is selected in the panel that appears, and click to select a lighter green.

- 8 Drag across all of the green shapes to select them.
- 9 Click the Group button in the Quick Actions section of the Properties panel.

- 10 Press the Caps Lock key to turn off the pointer crosshairs.

Outlining strokes

A path, like a line, can show a stroke color but not a fill color by default. If you create a line in Illustrator and want to apply both a stroke and a fill, you can outline the stroke of a path, which converts it into a closed shape (or compound path). Next, you'll outline the stroke of a line so you can erase parts of it in the next section to make the final part used to complete the first dinosaur.

- 1 Press the spacebar to access the Hand tool and drag in the document window to see the purple circle to the right.

- 2 With the Selection tool (▸) selected, click the path of the purple circle.

To erase part of the circle and make it look like a dinosaur frill, the circle will need to be a filled shape, not a path. For an example of what a frill looks like, see the figure at the start of the next section, "Using the Eraser tool." You should also see a set of gray lines that look like the spokes of a wheel. Those are just guides used for erasing. They were created by duplicating a straight line several times, and individually rotating each line 30° from the last.

- 3 Choose Object > Path > Outline Stroke.

This creates a filled shape that is a closed path. Next, you'll erase parts of the shape.

Using the Eraser tool

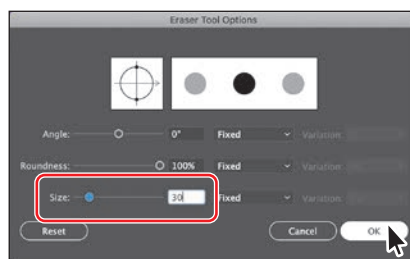

● **Note:** You cannot erase raster images, text, symbols, graphs, or gradient mesh objects.

The Eraser tool (◆) lets you erase any area of your vector artwork. You can use the Eraser tool on paths, compound paths, paths inside Live Paint groups, and clipping content. Whatever artwork you select is the only artwork you will erase. If you leave all objects unselected, you can erase any object that the tool touches across all layers. Next, you'll use the Eraser tool to erase part of the selected shape so it looks like a triceratops frill (see the figure).

1 Press and hold down the mouse button on the Knife tool (✂), and select the Eraser tool (◆) in the toolbar.

2 Double-click the Eraser tool (◆) in the toolbar to edit the tool properties. In the Eraser Tool Options dialog box, change Size to **30 pt** to make the eraser larger. Click OK.

You can change the Eraser tool options, depending on your needs.

3 Move the pointer above the selected purple circle. Between two guide lines, drag in a “U” shape to create a scallop.

When you release the mouse button, part of the shape is erased, and the shape is still a closed path. To finish, you'll erase the bottom of the circle shape.

4 Repeat this around the circle as you see in the figure, leaving the bottom intact.

- 5 Move the pointer as in the first part of the following figure. Drag back and forth across the bottom of the purple circle to erase it.

Erasing in a straight line

You can also erase in a straight line, which is what you'll do next.

- 1 Press the spacebar to access the Hand tool, and drag in the document window to see the partially complete dinosaur to the right.

- 2 With the Selection tool (▸) selected, click the cream-colored nose horn.

- 3 Choose View > Zoom In a few times to see more detail.

- 4 Double-click the Eraser tool (◆) to edit the tool properties. In the Eraser Tool Options dialog box, change Size to **20 pt** to make the eraser smaller. Click OK.

- 5 With the Eraser tool (◆) selected, move the pointer to where you see the red "X" in the first part of the following figure. Press the Shift key, and drag straight across to the right. Release the mouse button and then the Shift key.

If nothing is erased, try again. Also, it may look like you erased other parts of the shape, but if nothing else was selected, you didn't.

- 6 Choose File > Save.

Assemble the first dinosaur

To complete the dinosaur you see, you'll drag and position the artwork you have worked on to this point.

- 1 Choose View > Fit Artboard In Window.
- 2 With the Selection tool (▸) selected, drag the purple shape onto the beak of the dinosaur.
- 3 Drag the green group of shapes onto the head (see the following figure).
- 4 Drag the purple frill onto the purple circle behind the head.

- 5 If the purple frill covers any of the artwork, click Arrange toward the bottom of the Properties panel and choose Send Backward a few times until it looks like the figure.

Creating a compound path

Compound paths let you use a vector object to cut a hole in another vector object. Whenever I think of a compound path, I think of a doughnut shape, which can be created from two circles. Holes appear where paths overlap. A compound path is treated like a group, and the individual objects in the compound path can still be edited or released (if you don't want them to be a compound path anymore). Next, you'll create a compound path to create some art for a dinosaur's eyes.

- 1 Choose 2 Dino 2 from the Artboard Navigation menu in the lower-left corner of the Document window.
- 2 With the Selection tool (▸) selected, select the dark gray circle on the left, and drag it so it overlaps the larger yellow circle to its right.

Smart Guides help you align the circles. You can also select the two circles and align them to each other using the Align options in the Properties panel.

- 3 Drag across the gray circle and yellow circle to select both.
- 4 Choose Object > Compound Path > Make, and leave the artwork selected.

► **Tip:** You can still edit the original shapes in a compound path like this one. To edit them, select each shape individually with the Direct Selection tool (A), or double-click the compound path with the Selection tool, to enter Isolation mode and select individual shapes.

You can now see that the dark gray circle has seemingly disappeared, and you can see through the yellow shape to the aqua background shape. The dark gray circle was used to “punch” a hole in the yellow shape. With the shape still selected, you should see “Compound Path” at the top of the Properties panel to the right.

- 5 Drag the group of lines that is just to the right of the yellow shape, into the center of the yellow shape. The group of lines should be on top. If it isn't, choose Object > Arrange > Bring To Front.
- 6 Drag across the eye shapes to select them.
- 7 Choose Object > Group.
- 8 Choose Select > Deselect, and then choose File > Save.

Combining shapes

Creating more complex shapes from simpler shapes can be easier than trying to create them with drawing tools like the Pen tool. In Illustrator, you can combine vector objects in different ways. The resulting paths or shapes differ depending on the method you use to combine the paths. In this section, you'll explore a few of the more widely used methods for combining shapes.

Start by creating a shape

Before you can jump into combining shapes, you'll create a triangle. Then you'll combine it with a few other shapes that are already there. Those shapes will then become the last part of the dinosaur. Before creating the triangle, you'll swap the fill and the stroke so that the fill becomes the stroke for the new shape you make.

- 1 To swap the fill and the stroke of the shape so that the fill becomes the stroke, click the Swap Fill And Stroke option toward the bottom of the toolbar.

Having a stroke on the shape, rather than a fill, will make it easier to see the gray guide path.

- 2 Press and hold on the Rectangle tool and select the Polygon tool in the toolbar.
- 3 To the right of the eye shapes, in the middle of the artboard, you'll see a few yellow shapes. Starting in the center of the yellow circle, drag to create a polygon. While dragging, press the down arrow a few times until the shape has three sides (triangle). Drag until the shape is as wide as the gray triangle guide, press the Shift key to straighten it, and release the mouse button and then the key.

- 4 Drag the top edge of the triangle down to snap to the guide triangle, and drag the bottom bounding point up to snap to the same guide triangle.

Working with the Shape Builder tool

The first method you'll learn for combining shapes involves working with the Shape Builder tool (⌘+Shift+B). This tool allows you to visually and intuitively merge, delete, fill, and edit overlapping shapes and paths directly in the artwork. Using the Shape Builder tool, you'll create a more complex shape for another dinosaur head from a series of simpler shapes you create.

- 1 Select the Selection tool (V) and drag across the existing yellow paths and the shape you made. The guide path for the triangle is locked, so it won't be selected.
- 2 Change the stroke weight to **5 pt** in the Properties panel. Change the stroke color to the color named Orange to make it easier to see.

To edit shapes with the Shape Builder tool (⌘+Shift+B), they need to be selected. Using the Shape Builder tool, you will now combine, delete, and paint these simple shapes to create a single shape.

- 3 Select the Shape Builder tool (⌘+Shift+B) in the toolbar. Move the pointer off the left side of the shapes, and drag to the right. Release the mouse button to combine the shapes.

When you select the Shape Builder tool, the overlapping shapes are temporarily divided into separate objects. As you drag from one part to another, a red outline appears, showing you the resulting shape when the shapes are merged together.

► **Tip:** You can also press the Shift key and drag a marquee across a series of shapes to combine them. Pressing Shift+Option (macOS) or Shift+Alt (Windows) and dragging a marquee across selected shapes with the Shape Builder tool () allows you to delete a series of shapes within the marquee.

Next, you'll delete a few shapes. You may want to zoom in to the shapes.

● **Note:** When you position the pointer over the shapes, make sure you see the mesh within those shapes before clicking to delete.

- 4 With the shapes still selected, hold down the Option (macOS) or Alt (Windows) key. Notice that, with the modifier key held down, the pointer shows a minus sign (). Click in the *middle* of the shape on the far left, not the stroke, to delete it. Zoom in if you need. Refer to the figure to see which shape to remove.

- 5 Move the pointer below the shapes. Hold down the Option (macOS) or Alt (Windows) key and drag through the rest of the bottom shapes. Release the mouse button and then the key to remove those shapes.

- 6 Option-drag (macOS) or Alt-drag (Windows) across the two curved paths to delete them. Refer to the figure to see what to remove.

- 7 Select the Selection tool. To swap the fill and the stroke of the shape so that the stroke becomes the fill, click the Swap Fill And Stroke option toward the bottom of the toolbar.

Assemble the second dinosaur

To complete the second dinosaur, you'll drag and position the artwork you have worked on to this point.

- 1 Choose View > Fit Artboard In Window.
- 2 With the Selection tool (▸) selected, drag the yellow eye into place on the dinosaur and the orange shape onto the nose. Don't worry about exact positioning. Leave the last orange shape selected.
- 3 Choose View > Zoom In a few times to zoom in to the dinosaur.

- 4 To arrange the orange shape behind the other artwork on the nose, click Arrange in the Properties panel and choose Send Backward as many times as necessary. I had to choose it three times.

- 5 Click the yellow circle around the eye, and to resize it, press the Shift key and drag a corner. Release the mouse button and then the key. Drag it into place.

- 6 To make a copy, Option-drag (macOS) or Alt-drag (Windows) the eye to the other side. Release the mouse button and then the key.

- 7 Choose Select > Deselect, and then choose File > Save.

Combining objects using Pathfinder effects

Pathfinder effects, found in the Properties panel or the Pathfinder panel (Window > Pathfinder), are another way to combine shapes in a variety of ways. By default, when a Pathfinder effect such as Unite is applied, the original objects selected are *permanently* transformed.

- 1 Choose 3 Dino 3 from the Artboard Navigation menu in the lower-left corner of the Document window.
- 2 With the Selection tool (▸) selected, drag across the three ellipses with the black strokes to select them all.

You need to create a combined shape for the dinosaur head to the right. You will use the Properties panel and those shapes to create the final artwork.

- 3 With the shapes selected, in the Properties panel on the right, click the Unite button (☐) to *permanently* combine the three shapes into a path.

● **Note:** The Unite button in the Properties panel produces a similar result as the Shape Builder tool by combining multiple shapes into one.

- 4 Choose Edit > Undo Add to undo the Unite command and bring all of the shapes back. Leave them selected.

► **Tip:** Clicking More Options (☰) in the Pathfinder section of the Properties panel will reveal the Pathfinder panel, which has more options.

Understanding shape modes

In the previous section, the pathfinders made a permanent change to the shapes. With shapes selected, Option-clicking (macOS) or Alt-clicking (Windows) any of the default set of pathfinders showing in the Properties panel creates a compound shape rather than a standard shape (path). The original underlying objects of compound shapes are preserved. As a result, you can still select each original object within a compound shape. Using a shape mode to create a compound shape can be useful if you think that you may want to retrieve the original shapes at a later time.

- 1 With the shapes still selected, press the Option (macOS) or Alt (Windows) key and click the Unite button (☐) in the Properties panel.

This creates a compound shape that traces the outline of what's left after the shapes are combined. You'll still be able to edit the original shapes separately.

- 2 Choose Select > Deselect to see the final shape.
- 3 With the Selection tool, double-click the black stroke of the shape to enter Isolation mode.

You double-clicked the stroke of the shape and not anywhere in the shapes because they do not have a fill.

► **Tip:** To edit the original shapes in a compound shape like this one, you can also select them individually with the Direct Selection tool (⌵).

- 4 Click the edge of the ellipse at the top or drag across the path to select it.
- 5 Drag the selected ellipse straight down from the blue dot in the center, if you see it, or from the path stroke. As you drag, press the Shift key. When in position, release the mouse button and then the Shift key.

- 6 Press the Escape key to exit Isolation mode.

You will now expand the artwork appearance. Expanding the appearance of a compound shape maintains the shape of the compound object, but you can no longer select or edit the original objects. You will typically expand an object when you want to modify the appearance attributes and other properties of specific elements within it.

- 7 Click away from the shape to deselect it and then click to select it again. That way the entire object is selected, and not just the one shape.
- 8 Choose Object > Expand Appearance.

The Pathfinder effect is now *permanent* and the shapes are a single shape.

- 9 Change the Fill color in the Properties panel to an aqua. Change the stroke weight to 0.

Reshaping a path

In Lesson 3 you learned about creating shapes and paths (lines). You can use the Reshape tool to stretch parts of a path without distorting its overall shape. In this section, you'll change the shape of a line, giving it a bit of curve, so you can finish the nose of one of the dinosaurs.

- 1 Make sure the Smart Guides are on (View > Smart Guides).
- 2 With the Selection tool (▸) selected, click the green path in the middle of the artboard.
- 3 To make it easier to see, press Command and + (macOS) or Ctrl and + (Windows) a few times to zoom in.

- 4 Click Edit Toolbar (☰) at the bottom of the toolbar. Scroll in the menu that appears, and drag the Reshape tool (↶) onto the Rotate tool (⤵) in the toolbar on the left to add it to the list of tools.

● **Note:** You may want to press the Escape key to hide the extra tools menu.

- 5 With the Reshape tool (↶) selected, move the pointer over the middle of the path. When the pointer changes (↷), drag to the left to add an anchor point and reshape the path.

● **Note:** You can use the Reshape tool on a closed path, like a square or circle, but if the entire path is selected, the Reshape tool will add anchor points and move the path.

The Reshape tool can be used to drag an existing anchor point or path segment. If you drag from an existing path segment, an anchor point is created.

● **Note:** Only selected anchor points are adjusted when dragging with the Reshape tool.

- 6 Move the pointer over the top anchor point of the path and drag it to the left a little. Leave the path selected.

Using the Width tool

Not only can you adjust the weight of a stroke, as you did in Lesson 3, but you can alter regular stroke widths either by using the Width tool () or by applying width profiles to the stroke. This allows you to create a variable width along the stroke of a path. Next, you will use the Width tool to adjust the path you just reshaped.

► **Tip:** You can drag one width point on top of another width point to create a discontinuous width point. If you double-click a discontinuous width point, the Width Point Edit dialog box allows you to edit both width points.

- 1 Select the Width tool () in the toolbar. Move the pointer over the middle of the path you just reshaped, and notice that the pointer has a plus symbol next to it () when it's positioned over the path. If you were to drag, you would edit the width of the stroke. Drag away from the line, to the right. Notice that, as you drag, you are stretching the stroke to the left and right equally. Release the mouse button when the measurement label shows Width at approximately 0.4 in.

You just created a variable stroke on a path, not a shape with a fill. The new point on the original path is called the *width point*. The lines extending from the width point are the *handles*.

► **Tip:** If you select a width point by clicking it, you can press Delete to remove it. When there is only one width point on a stroke, removing that point removes the width completely.

- 2 Click in an empty area of the artboard to deselect the point.
- 3 Move the pointer anywhere over the path, and the width point you just created will appear (an arrow is pointing to it).
- 4 Move the pointer over the original width point, and when you see lines extending from it and the pointer changes () , drag it up and down to see the effect on the path.

In addition to dragging to reposition a width point, you can double-click and enter values in a dialog box. That’s what you’ll do next.

- 5 Move the pointer over the top anchor point of the path, and notice that the pointer has a wavy line next to it (⤴) and the word “anchor” appears (see the first part of the following figure). Double-click the point to create a new width point and to open the Width Point Edit dialog box.
- 6 In the Width Point Edit dialog box, change Total Width to **0 in**, and click OK.

▶ **Tip:** You can select a width point and Option-drag (macOS) or Alt-drag (Windows) one of the width point handles to change one side of the stroke width.

▶ **Tip:** After defining the stroke width, you can save the variable width as a *profile* that you can reuse later from the Stroke panel or the Control panel. To learn more about variable width profiles, search for “Painting with fills and strokes” in Illustrator Help (Help > Illustrator Help).

The Width Point Edit dialog box allows you to adjust the length of the width point handles, together or separately, with more precision. Also, if you select the Adjust Adjoining Width Points option, any changes you make to the selected width point affect neighboring width points as well.

- 7 Move the pointer over the bottom anchor point of the path, and double-click. In the Width Point Edit dialog box, change Total Width to **0 in**, and click OK.

- 8 Move the pointer over the original width point. When the width point handles appear, drag one of them away from the center of the path to make it a little wider. Leave the path selected for the next section.

- 9 Change the Stroke color in the Properties panel to black.

Assemble the last dinosaur

To complete the dinosaur you see, you'll drag and position the artwork you have worked on to this point.

- 1 Choose View > Fit Artboard In Window.
- 2 With the Selection tool (▸) selected, drag the aqua dinosaur head shape and the path you reshaped onto the dinosaur to the right. Leave the black reshaped path selected.
- 3 Choose View > Zoom In a few times to zoom in to the dinosaur.
- 4 Shift-drag the corner of the black path to make it smaller. Notice that the stroke weight is still the same even though the line is smaller. This happens by default. Change the stroke weight in the Properties panel to **19**.

- 5 Drag it into the position you see in the figure for the next step.
- 6 To make a copy of the reshaped path, Option-drag (macOS) or Alt-drag (Windows) the eye to the other side. Release the mouse button and then the key.
- 7 In the Properties panel, click Flip Along Horizontal Axis to flip the shape.

- 8 Choose View > Fit All In Window.
- 9 Choose File > Save and then choose File > Close.

Review questions

- 1 Name two ways you can combine several shapes into one.
- 2 What is the difference between the Scissors tool () and the Knife tool ()?
- 3 How can you erase with the Eraser tool () in a straight line?
- 4 What is the main difference between shape modes and Pathfinder effects in the Properties panel or Pathfinder panel?
- 5 Why would you outline strokes?

Review answers

- 1 Using the Shape Builder tool () , you can visually and intuitively merge, delete, fill, and edit overlapping shapes and paths directly in the artwork. You can also use the Pathfinder effects, which can be found in the Properties panel, the Effects menu, or the Pathfinder panel, to create new shapes out of overlapping objects.
- 2 The Scissors tool () is meant to split a path, graphics frame, or empty text frame at an anchor point or along a segment. The Knife tool () cuts objects along a path you draw with the tool, dividing objects. When you cut a shape with the Scissors tool, it becomes an open path. When you cut a shape with the Knife tool, the resulting shapes become closed paths.
- 3 To erase in a straight line with the Eraser tool () , press and hold the Shift key before you begin dragging with the Eraser tool.
- 4 In the Properties panel, when a shape mode (such as Unite) is applied, the original objects selected are permanently transformed, but you can hold down the Option (macOS) or Alt (Windows) key and the original underlying objects are preserved. When a Pathfinder effect (such as Merge) is applied, the original objects selected are permanently transformed.
- 5 Paths, like a line, can show a stroke color but not a fill color by default. If you create a line in Illustrator and want to apply both a stroke and a fill, you can outline the stroke, which converts the line into a closed shape (or compound path).
